
90-Day Roadmap to Master Full Stack Development

Days 1–10: HTML & CSS

- Understand HTML structure and semantic tags (header, nav, section, article, footer).
- Learn how to create forms, embed images/videos, use lists and tables.
- Master CSS: selectors, box model, Flexbox, Grid.
- Build 2–3 responsive webpages.
- Tools: VS Code + Live Server.
- Practice: frontendmentor.io

Days 11–20: JavaScript (Basics)

- Learn syntax: variables (var, let, const), data types, loops, conditionals.
- Master functions: normal, arrow, parameters.
- DOM Manipulation: querySelector, innerText, classList, addEventListener.
- Projects: Counter, Todo List, Calculator.
- Learn from: javascript.info

Days 21–30: JavaScript (Advanced)

- ES6+: template literals, destructuring, spread/rest.

- Async JS: callbacks, promises, async/await.
 - Fetch API + working with JSON.
 - Mini Project: Weather App using OpenWeatherMap API.
-

Days 31–40: Git + Responsive Design

- Git: init, add, commit, push, pull, branch.
 - GitHub: repositories, PRs, issues, stars.
 - Responsive CSS: rem/em/%, Media Queries.
 - Tools: GitHub Pages / Netlify.
 - Project: Responsive Personal Portfolio.
-

Days 41–50: React JS

- Concepts: JSX, Components, Props, State.
 - React Hooks: useState, useEffect.
 - Routing: React Router DOM.
 - Build a dynamic blog or portfolio with reusable components.
 - Tools: Vite or CRA.
-

Days 51–60: Node.js + Express.js (Backend Basics)

- Understand Node.js modules, file system, path, events.
- Express: server setup, routes, middleware.

- REST APIs (GET, POST, PUT, DELETE).
 - Project: Basic CRUD API (e.g., Blog or Notes API).
-

✓ Days 61–70: MongoDB + Mongoose

- Learn CRUD in MongoDB.
 - Use MongoDB Atlas (cloud DB).
 - Mongoose for schema + validation.
 - Project: Full Stack ToDo App (React + Node + MongoDB).
-

✓ Days 71–80: Authentication & Authorization

- Concepts: Auth vs. AuthZ.
 - Password hashing with bcrypt.
 - Use JWT for login systems.
 - Protect routes with middleware.
 - Project: Auth system with dashboard access.
-

✓ Days 81–85: Deployment + CI/CD

- Environment Variables: `.env` files + `dotenv`.
- Deployment: Frontend (Netlify/Vercel), Backend (Render/Railway).
- Use Postman for testing APIs.
- Setup basic GitHub Actions for CI/CD.

- Final API documentation (Markdown or Swagger).
-

Days 86–90: Final Full Stack Project

- Build a complete app combining frontend + backend + auth.
 - Ideas:
 - Job board with login & posting
 - Blogging site with admin access
 - E-commerce mini app
 - Use GitHub for version control.
 - Host and share live links with README.
-

English Playlists

1. [Node.js Crash Course – Traversy Media](#)
Quick and beginner-friendly Node.js crash course.
 2. [The Net Ninja – Node.js Tutorial for Beginners](#)
Covers basics to advanced concepts in Node.js.
 3. [Traversy Media – Web Dev for Beginners](#)
Complete web development journey for beginners.
 4. [Codevolution – React JS Tutorial](#)
Deep dive into React JS from scratch.
 5. [LearnCode.academy – Full Stack Web Development](#)
Covers Frontend + Backend basics in one place.
 6. [Academind – MERN Stack Tutorial](#)
Practical full stack project-based series.
-

Hindi Playlists

1. [CodeWithHarry – Web Development Full Course \(Hindi\)](#)
Beginner-friendly course in Hindi.
2. [Apna College – Full Stack Development Series](#)
Structured and beginner-focused series.
3. [Thapa Technical – MERN Stack Tutorials](#)
Learn full stack development step by step.
4. [Love Babbar – Web Dev for Placement Prep](#)
Coding + Web Dev content targeted at students.
5. [JavaScript Beginner to Advanced \(in Hindi\)](#)
One-shot video for learning JavaScript basics.
